

In the Claims

51. (New) A conferencing system comprising:

a conference server;

at least one client; and

networking connections coupling the conference server and the at least one client, the conference server providing conferencing data to the at least one client via the network connections, where the conferencing data is provided in an output based on a determined size of at least a portion of the conferencing data.

52. (New) A conferencing system comprising:

a conference server;

at least one client; and

networking connections coupling the conference server and the at least one client, the conference server providing conferencing data to the at least one client via the network connections, where the conferencing data is provided in a compressed format.

53. (New) A method for conferencing between a server and at least one client in a conferencing system comprising:

establishing a network connection between the server and the at least one client;

determining a size of conferencing data; and

providing at least a portion of the conferencing data from the server to the at least one client, the conferencing data in a format based on the determined size of at least a portion of the conferencing data.

54. (New) A method for conferencing between a server and at least one client in a conferencing system comprising:

establishing a network connection between the server and the at least one client;

determining a type of compression to be used; and

providing conferencing data from the server to the at least one client, the conferencing data in a format based on the determined type of compression to be used.
